COLLEGE WEBSITE

Consolidated Web Development Report

Example Valley Institute of Technology (EVIT)

HTML structure • External CSS styling • Page-section previews

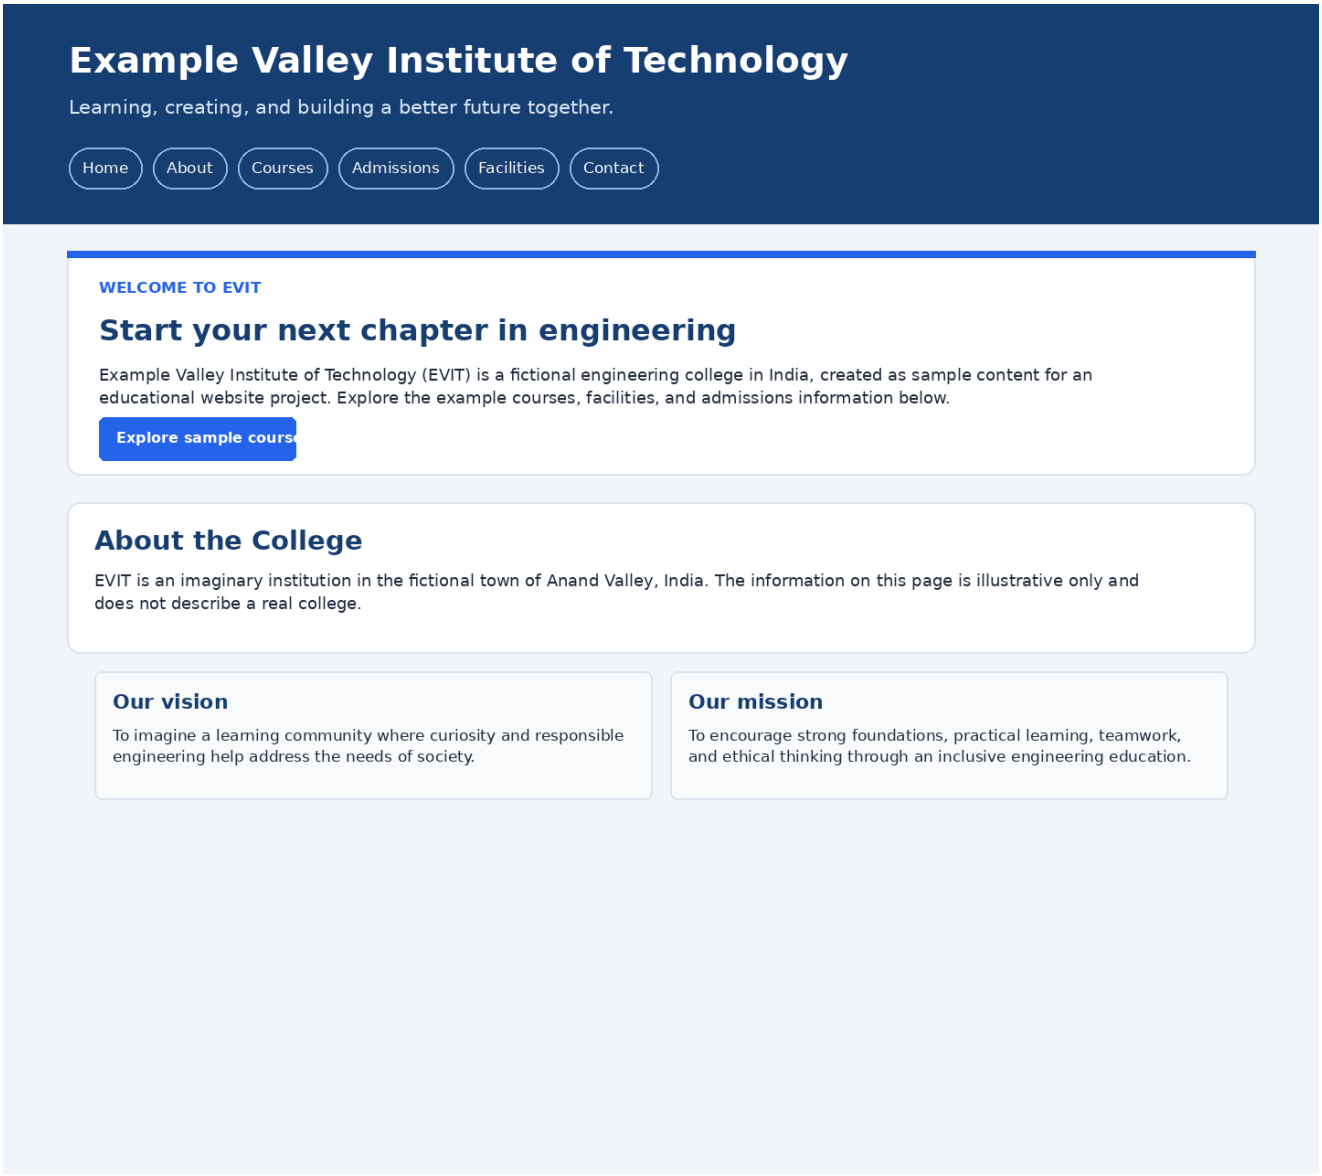

Project overview

This report presents the supplied college information webpage, including the welcome section, college overview, engineering courses, admissions and sample fees, campus facilities, gallery, and contact enquiry form.

Note: EVIT and the contact/admissions information are fictional sample content, as stated in the source webpage. The visuals in this report are recreated previews based on the supplied HTML and CSS, not direct browser screenshots; external campus photos are represented by placeholders in the preview.

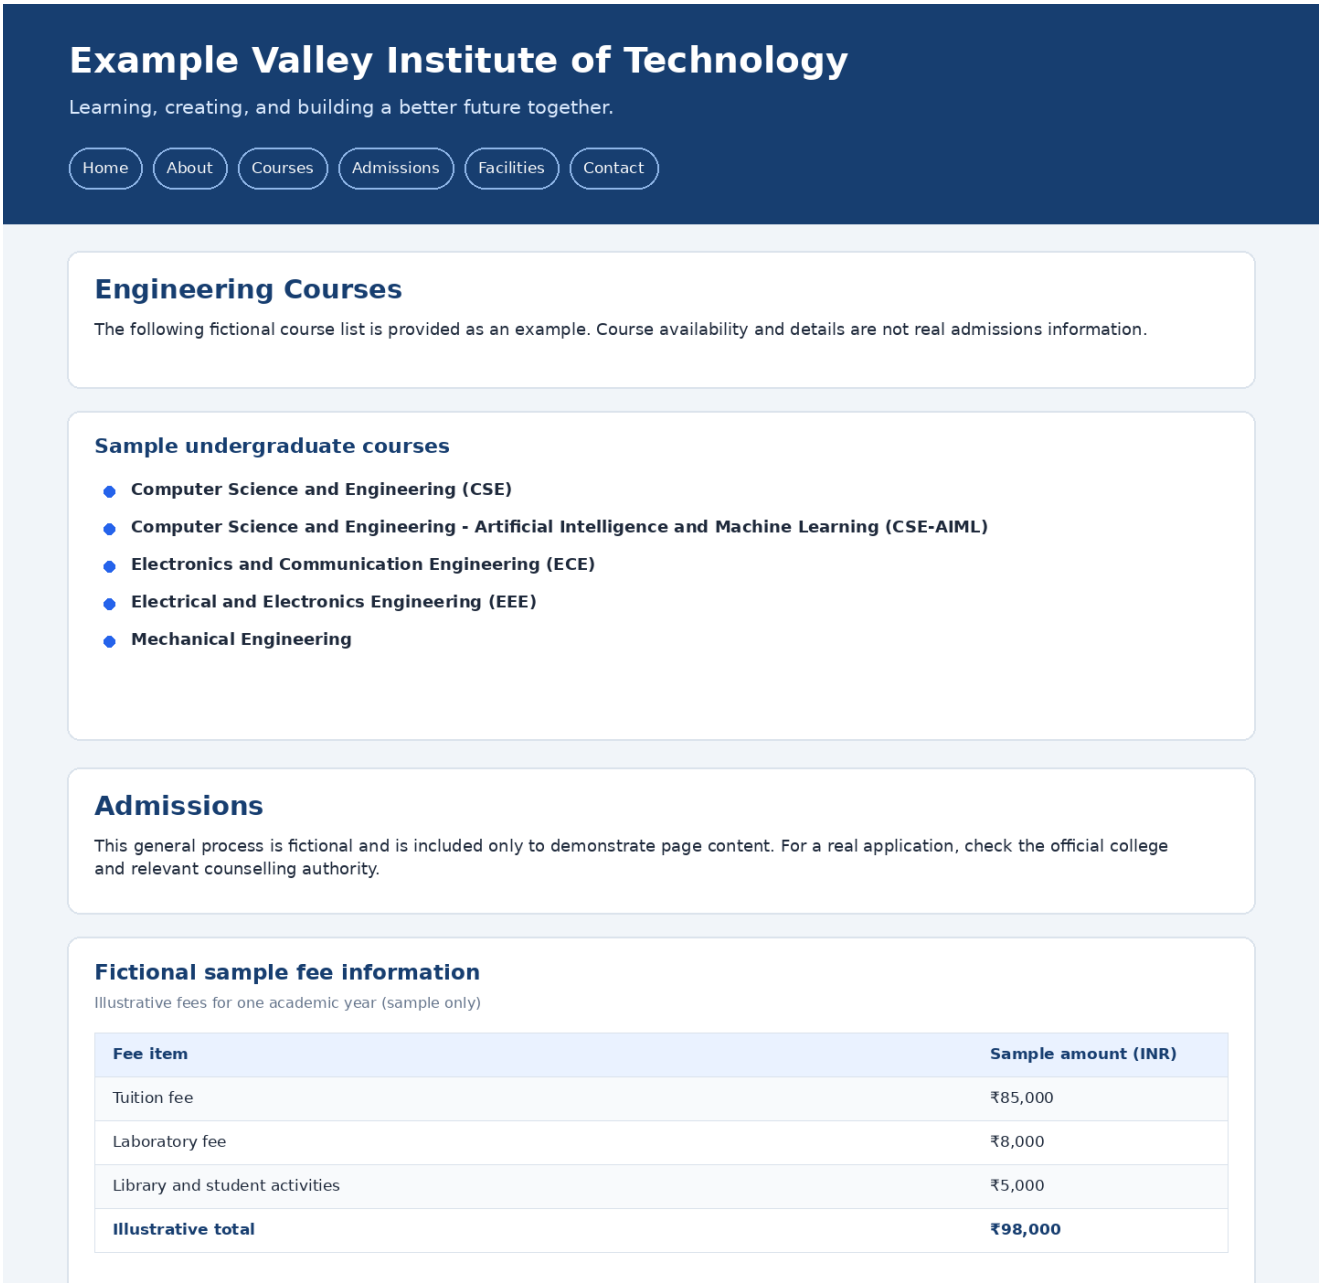

1. Home and About the College

Shows the navy header and navigation, welcome banner, call-to-action link, and the college vision and mission.

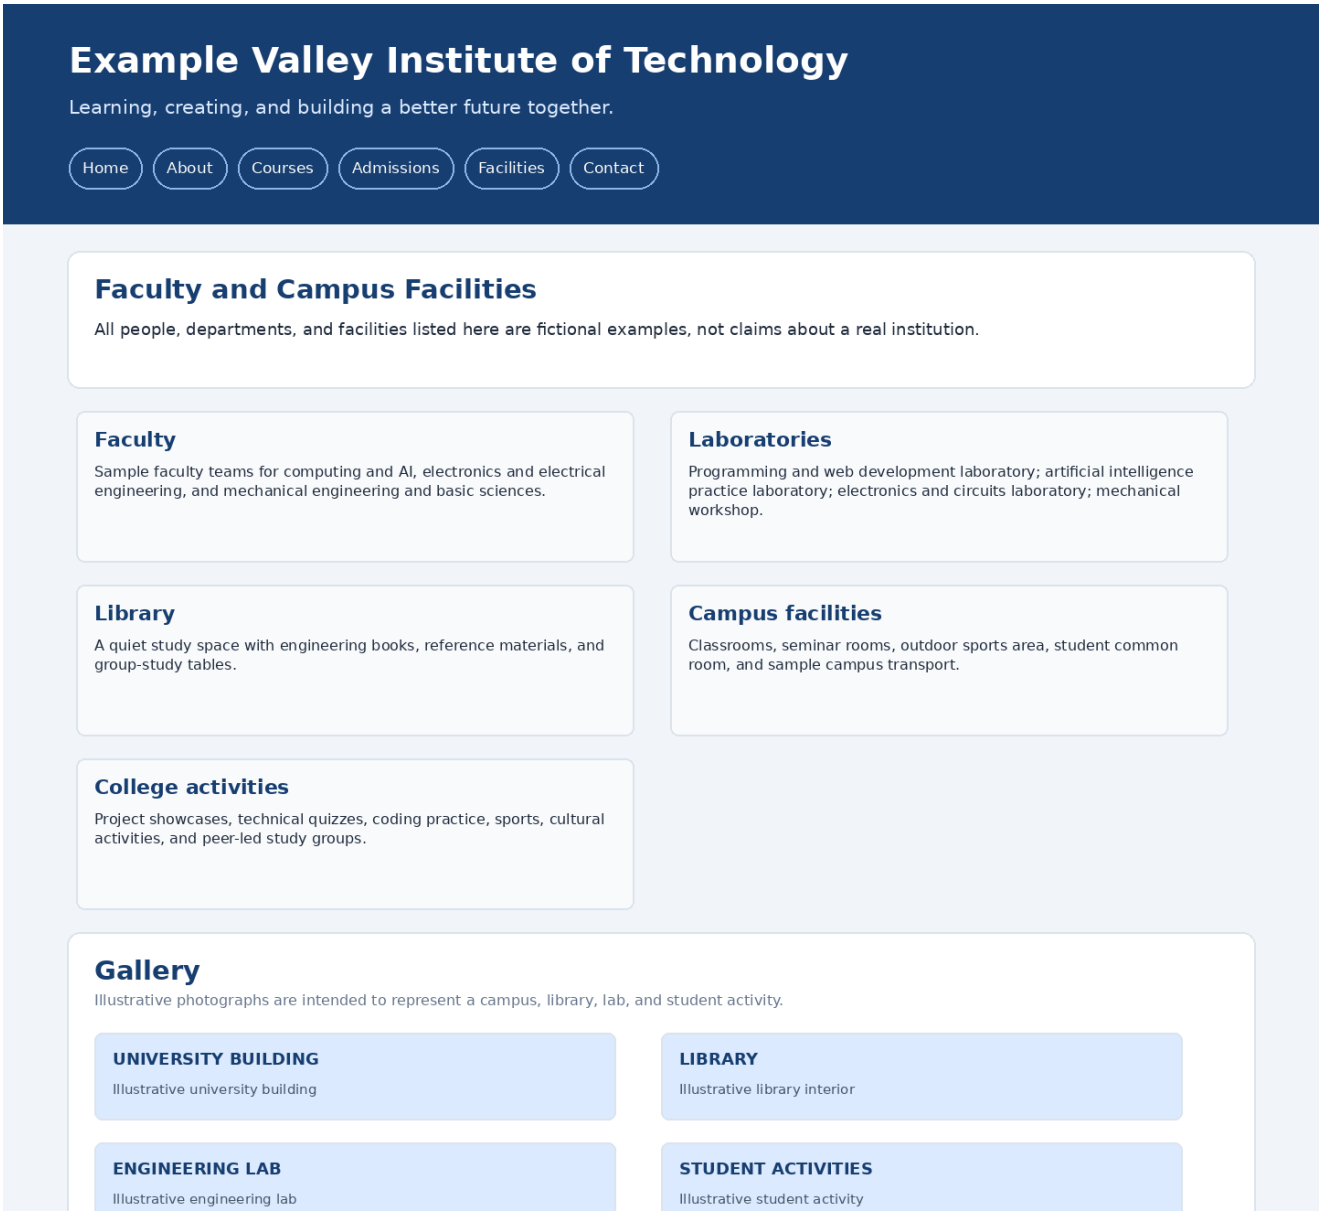

2. Courses and Admissions

Shows the sample engineering course list, fictional admissions process, and illustrative fee table.

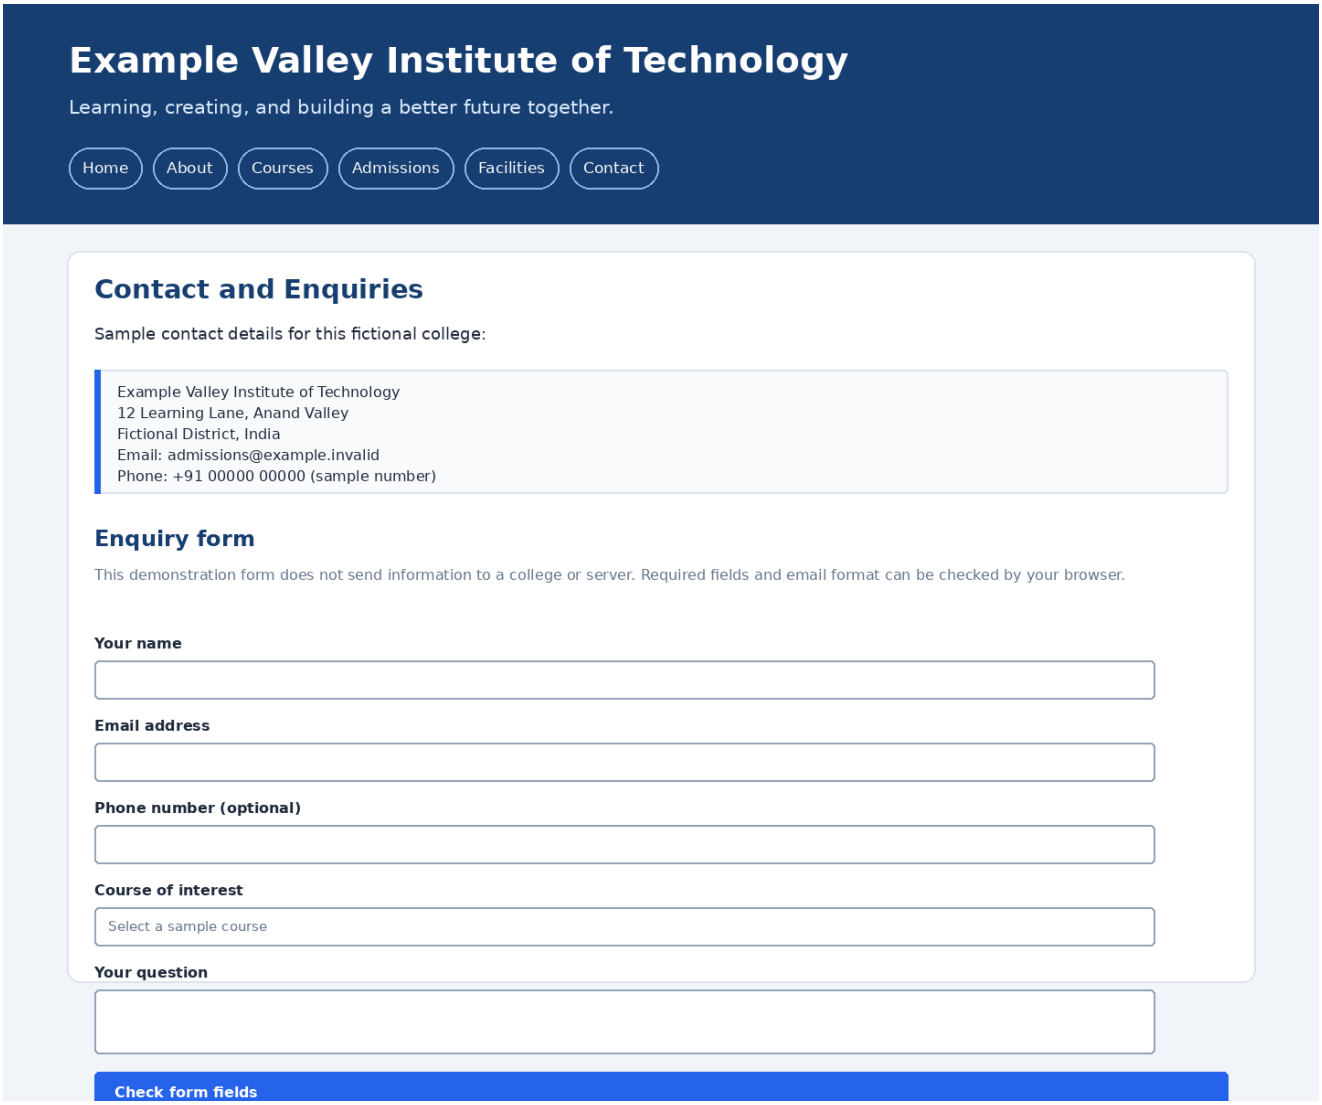

3. Facilities and Gallery

Shows faculty, laboratories, library, campus facilities, student activities, and gallery layout.

4. Contact and Enquiry Form

Shows fictional contact information and the enquiry form fields, including name, email, phone, course interest, and question.

Project Summary

The page uses semantic HTML sections and a separate stylesheet (CIA.css). The visual system uses a navy-and-blue palette, white content panels, rounded borders, spacing, and hover states for navigation links and buttons. The layout includes lists, a table, a gallery, contact information, and a browser-validated demonstration form.

Files referenced

- index.html — webpage markup reconstructed from the supplied HTML file
- CIA.css — external stylesheet based on the CSS supplied in chat
- preview_01.png to preview_04.png — report visuals for the page sections

The enquiry form uses action="#" and method="get" in the supplied markup. It demonstrates browser-side required-field and email-format validation; it does not submit enquiries to an actual college service.
