OPEN SHELF

Digital Library Website

Consolidated Web Development Report

HTML structure • External CSS styling • Page-section previews

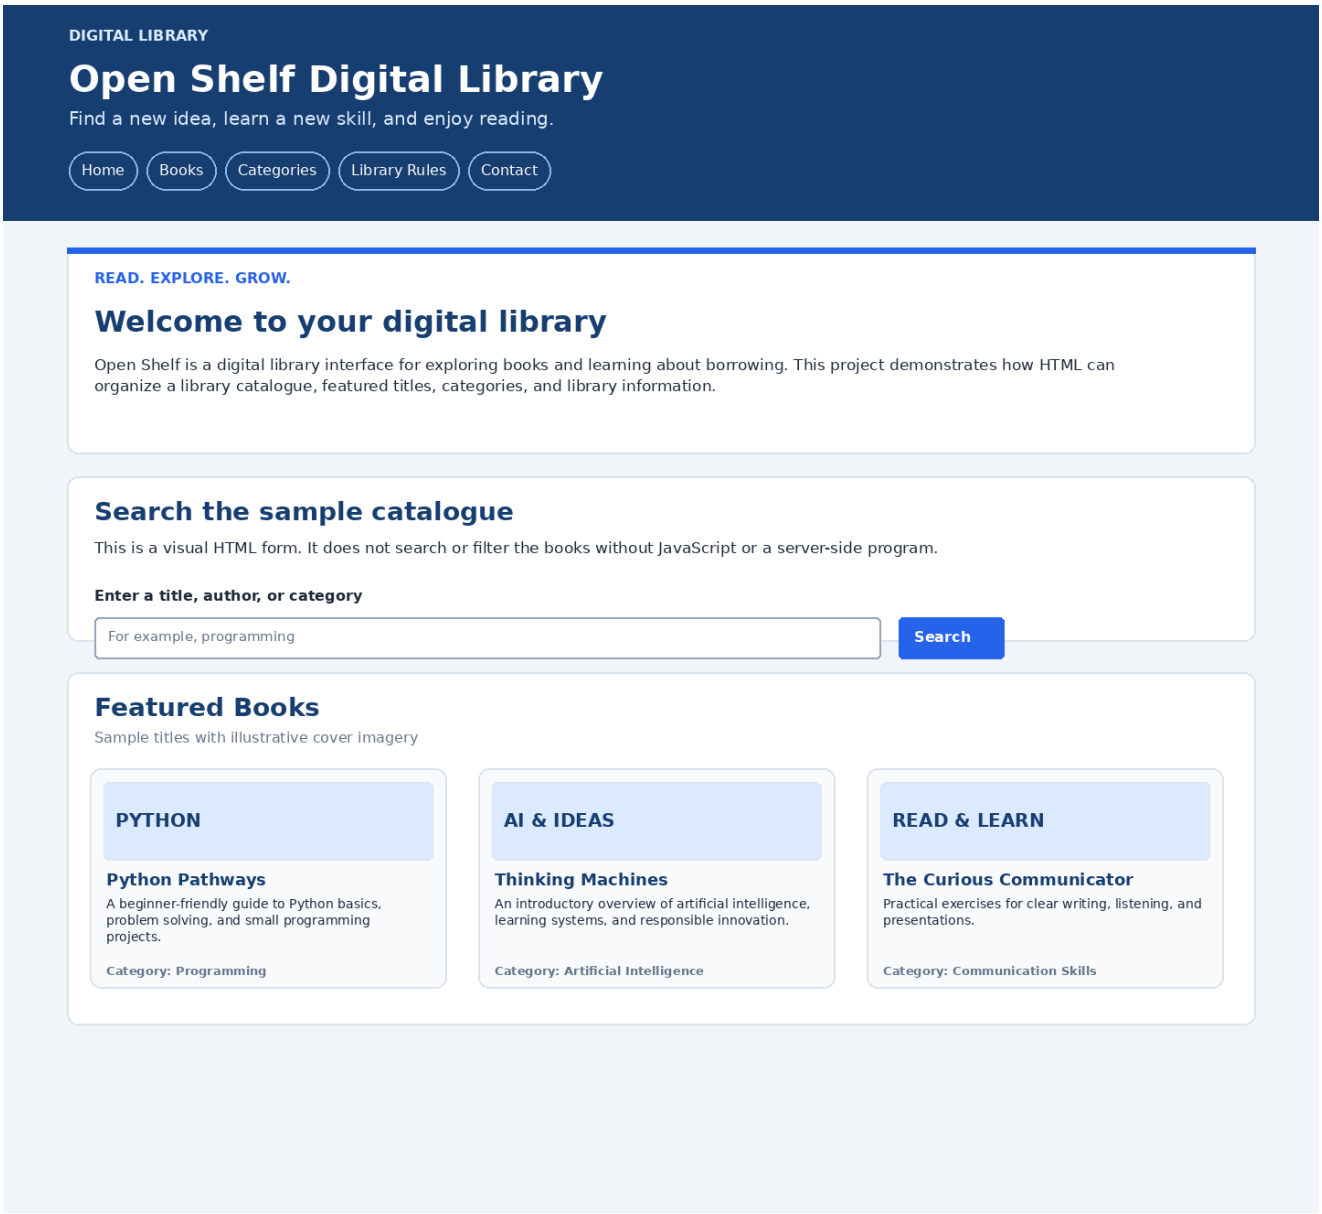

Project overview

This report presents the supplied Open Shelf Digital Library webpage, including its welcome section, search form, featured books, categories, sample catalogue, membership and borrowing rules, and contact information.

Note: The website content, catalogue records, rules, and contact details are explicitly sample content. The visuals are recreated previews based on the supplied HTML and CSS, not direct screenshots captured from a running browser. Cover imagery is represented by illustrative placeholders.

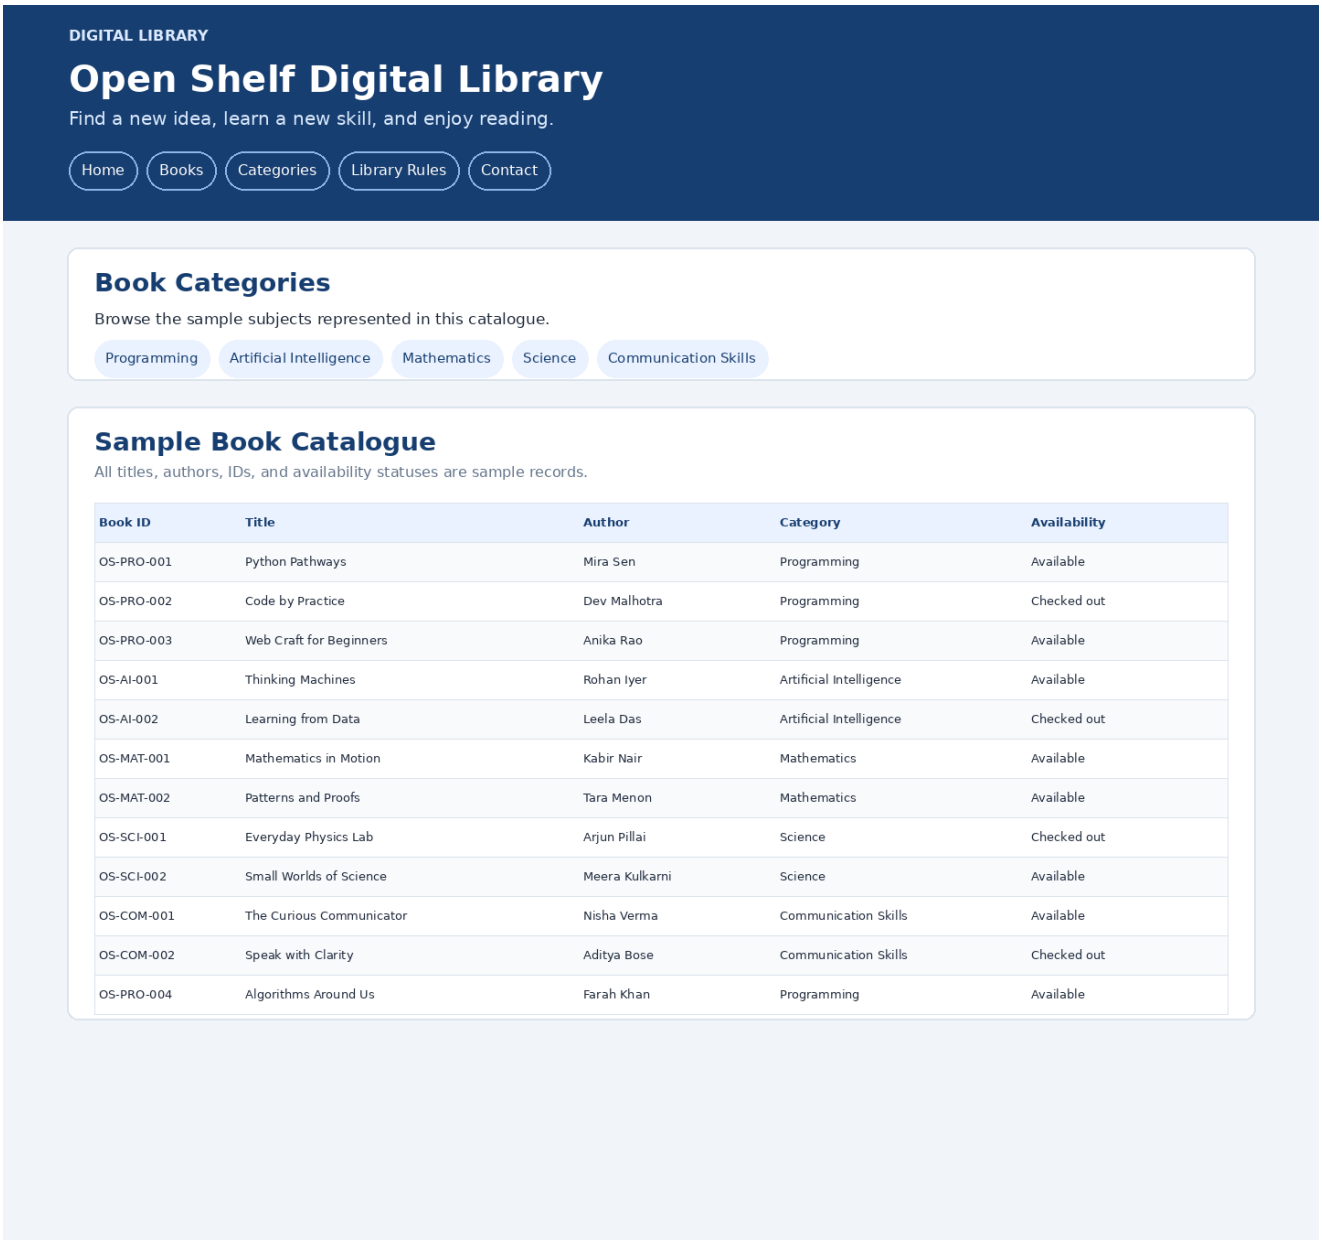

1. Welcome, Search and Featured Books

Shows the library header and navigation, welcome banner, search form, and three featured book cards.

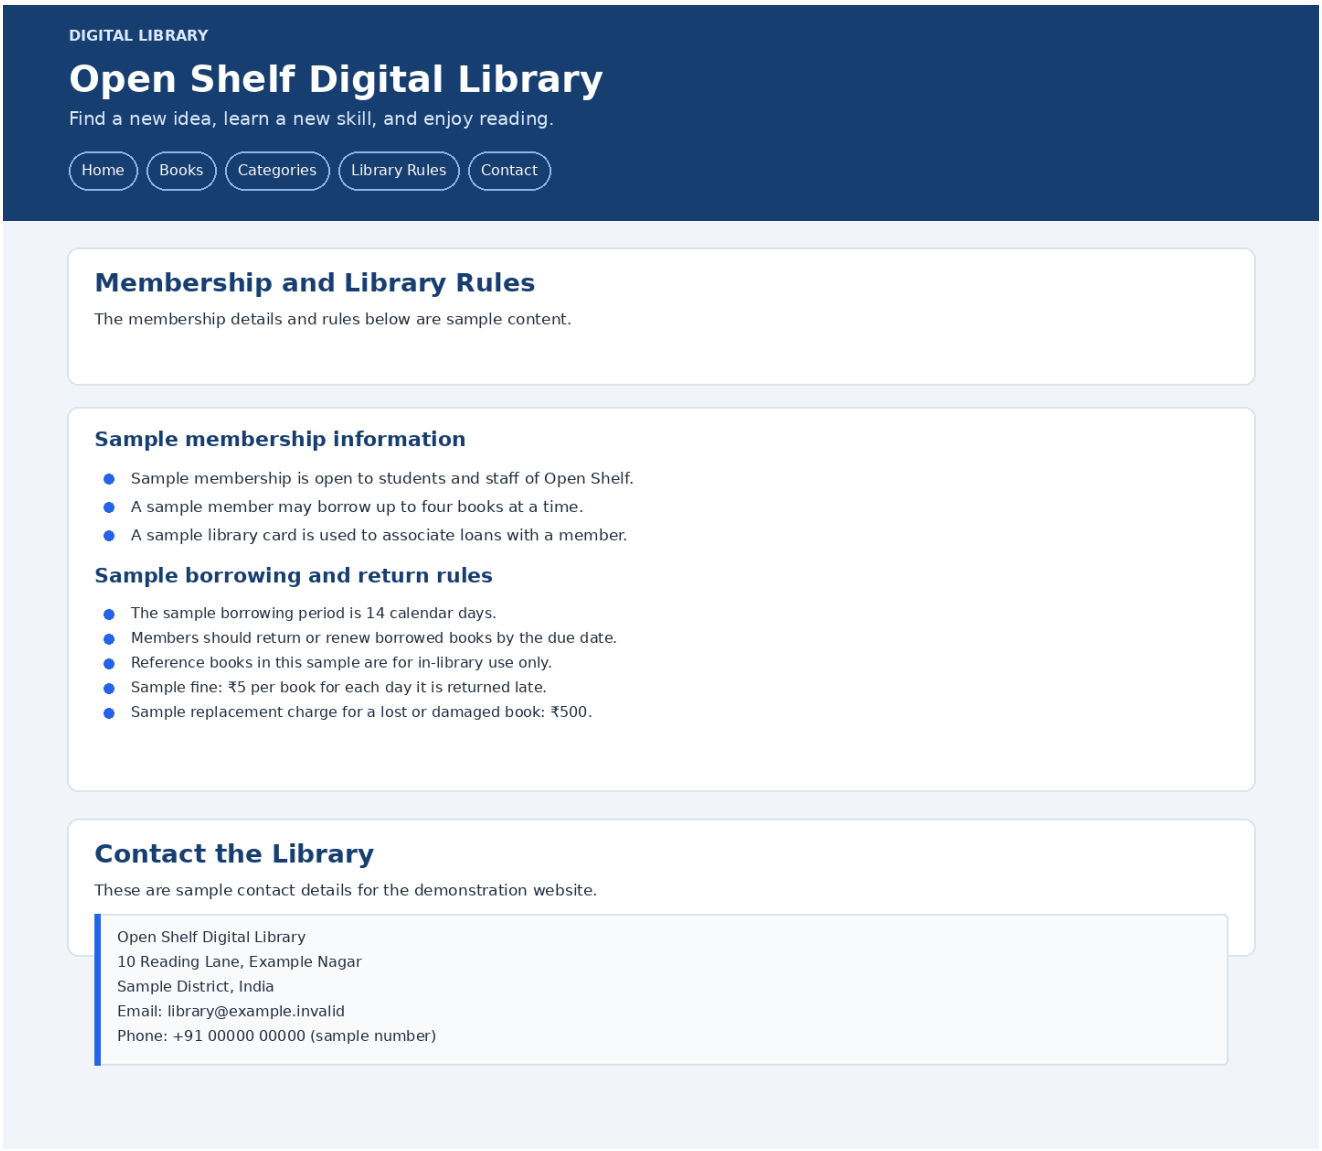

2. Categories and Sample Catalogue

Shows the category links and catalogue table with sample IDs, titles, authors, categories, and availability.

3. Library Rules and Contact

Shows sample membership and borrowing rules, plus the library's fictional contact details.

Project Summary

The supplied HTML links to an external stylesheet named DLM.css. The CSS uses a navy-and-blue color palette, rounded white content panels, navigation hover effects, featured-book cards, category links, a responsive overflow wrapper for the table, and styled contact details.

Functionality note

The search form is a visual HTML form only. As the source HTML itself states, it does not search or filter catalogue entries without JavaScript or a server-side program.

Files represented

- HTML source: Open Shelf Digital Library
- External stylesheet: DLM.css
- Preview images: three section previews included in this report
